Preseparators and Disposal Systems

Customised preseparators and disposal systems

When positioned between the suction point and suction unit, preseparators deposit all sorts of vacuumed materials, thus relieving the filter. Whether the material is dry, damp or wet, it will be gathered or separated, disposed of or recycled in the most diverse customised preseparators or disposal systems.

Preseparator barrels, galvanized, 35, 50, 110, 200 litres, with lid

Preseparator barrels, V2A, 70, 100, 200 litres, with cover

Tipping container

Trolley with tipping mechanism

Industrial vacuum and 200 litre barrel with pre-filter cell

DS 2... (and WS 3...) with various disposal systems

Suction unit with silo
- silo with integrated, regenerative filter
- on a chassis with bagging mechanism

High-speed cyclone with continuous discharge

DS 1... (and WS 2...) with various disposal systems
