

Applications

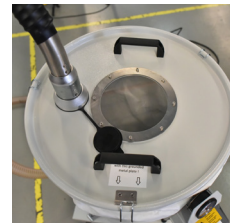

Effective cleaning of cutting waste in production line

DAV deduster are used on production lines to vacuum both lint and cutting waste (e.g. paper, plastic, fabric). The suction power, construction and dimensions are adapted for the requirements of the production machines with which they are used. Cutting waste is vacuumed and collected in a filter bag designed for dust class M. In this way, the collected material compacts well, so the full potential volume of the filter can be used. When it is full, the filter can be easily removed from the vacuum.
